

Corylus columna

TURKISH HAZEL, TURKISH FILBERT TREE

This is a deciduous tree with a pyramidal shape and lateral branching. While it produces a 'fruit' encased in a bristly husk it is widely cultivated as an ornamental tree in Europe and North America. It is very tolerant of difficult growing conditions in urban situations.

 Deciduous

 Horizontal Branching

12 x 8m

Makes a beautiful specimen tree. It is used in commercial hazelnut orchards, as it does not sucker, making it the ideal rootstock on which to graft more common hazelnut cultivars.

This tree tolerates sandy, loam, and heavier clay soils. It prefers moist soil but can tolerate drought. The plant can tolerate strong winds, but not frontline coastal conditions. Being a forest species, it withstands partial shade and shade, especially at a young age.
