

Corymbia ficifolia

FLOWERING GUM TREE

This flowering Corymbia (syn. Eucalyptus) forms a tight rounded shape with thick, dark green foliage which is lighter in colour on the underside. The trunk is rough and dark brown, and in summer a profusion of brightly coloured flowers appear, making quite a statement when in full flower. Following this grand floral display, large urn-shaped gumnuts appear.

Growing to 15m, it is often used in parks and gardens. Is also useful as a street tree.

Prefers full sun and well-drained soils.
