

Eucalyptus camaldulensis

RIVER RED GUM TREE

Red River Gums are widespread in the Australian landscape, most commonly found along stream banks and rivers or in flood plains. They grow very tall with most trees exhibiting a stripy bark revealing pale grey, charcoal and occasionally pink colourings. Foliage is relatively short and narrow.

As a big tree, it is most suitable for developments and landscapes that require a big native tree.

While they tolerate most soil types, River Red Gums prefer well-drained sites in full sun or part shade.
