

Gleditsia triacanthos var. inermis 'Ruby Lace'

RED GOLDEN LOCUST TREE

This variety is a lovely feature tree with a broad, open, spreading canopy and fine weeping foliage that droops towards the ground. New growth emerges a ruby-red colour and changes to its usual bronze-green. Foliage turns yellow in autumn before falling.

Excellent unusual specimen tree, with striking visual appearance.

It is a hardy variety, reasonably fast growing and will tolerate some periods of dryness once established. Prefers a full to part sun position. Can tolerate a wide range of growing conditions. Tolerates air pollution and urban conditions. Ensure any shoots that develop under the graft point are removed cleanly and promptly.

Foliage Deciduous

Form Pendulous

Mature Size 8 x 6m

Family Fabaceae, subfamily
Caesalpinioideae
