

Jacaranda mimosifolia

JACARANDA TREE

This fast-growing tree is an elegant specimen with soft, green foliage which turns yellow in winter before shedding. Flowering occurs in summer, when purple, bell-shaped blooms are produced, covering the canopy. The seed pods are very distinct fleshy curved green pods that eventually dry and open. It is an attractive open tree with branches upwardly ascending. A great summertime feature due to its stunning purple flowers.

An attractive feature tree in medium to large gardens. It is often used in parks and street planting. Great filtered shade tree in gardens.

Prefers most soils in a full sun position. It can handle periods of drought and periods of wet weather. In an average garden fertiliser is not needed.

Foliage Deciduous
Form Broad-domed
Mature Size 10 x 8m
Family Bignoniaceae
