

Populus nigra 'Italica'

LOMBARDY POPLAR TREE

This is a tall and vigorous growing deciduous tree. With a tolerance to exposed conditions, it is often seen lining country roads, driveways and avenues, and in paddocks where it acts as a useful windbreak. It has bright green, diamond-shaped ovate leaves that start bronze, turn green and eventually, a brilliant gold in autumn.

A very big tree, so we suggest only planting this one in very large spaces. A good selection for lining areas especially in exposed conditions. Good for screening and tall hedges on large properties or as part of farm windbreaks. Is known to have a vigorous root system, so avoid planting near buildings or underground infrastructure, or take additional precautions.

Prefers a well-drained soil but can tolerate lesser conditions. Avoid planting in areas that are prone to water-logging. Likes full sun.

Foliage Deciduous

Form Columnar

Mature Size 20-30 x 4m

Family Salicaceae
