

Prunus persica nucipersica 'White Satin'

WHITE SATIN NECTARINE TREE (LOW-CHILL)

This is a beautiful blushed bright-red and yellow skin nectarine with white flesh. It produces aromatic, sweet and juicy fruit. Flowers in late winter and fruit in December. 'White Satin' is self-pollinating and works well in both warm-temperate and subtropical climates, as it requires low chill hours.

This is a self-pollinating nectarine and can be pruned to 2m which makes it ideal for small gardens. Suitable for planting in 35+ litre containers.

Plant in a full sun position with a neutral good draining soil. Prune after fruiting in summer to encourage fruiting wood for the following season. It is a low-chill variety and is frost-tolerant. The tree is deciduous and loses leaves in winter.

Foliage Deciduous

Form Round

Mature Size 4m x 4m

Family Rosaceae

Small
